

Operaciones con fracciones

5° Grado

Mtra. Nayeli Piedra

 **LIVEWORKSHEETS**

1. Completa los procedimientos de cada operación, utilizando el método de m.c.m.

$$\frac{7}{6} + \frac{2}{5} = \frac{\boxed{7} \times \boxed{} + \boxed{} \times \boxed{}}{\boxed{}} = \frac{\boxed{} + \boxed{}}{\boxed{30}} = \frac{\boxed{}}{\boxed{}}$$

$$\frac{1}{7} + \frac{1}{8} = \frac{\boxed{} \times \boxed{8} + \boxed{} \times \boxed{}}{\boxed{}} = \frac{\boxed{} + \boxed{}}{\boxed{}} = \frac{\boxed{15}}{\boxed{}}$$

$$\frac{6}{9} - \frac{1}{3} = \frac{\boxed{} \times \boxed{} - \boxed{1} \times \boxed{}}{\boxed{}} = \frac{\boxed{6} - \boxed{}}{\boxed{}} = \frac{\boxed{}}{\boxed{}}$$

$$\frac{11}{4} - \frac{9}{8} = \frac{\boxed{} \times \boxed{} - \boxed{} \times \boxed{}}{\boxed{8}} = \frac{\boxed{} - \boxed{9}}{\boxed{}} = \frac{\boxed{}}{\boxed{}}$$

2. Selecciona la casilla que tiene el resultado de cada operación.

$$\frac{8}{5} + \frac{3}{7} =$$

$$\frac{71}{35}$$

$$\frac{11}{12}$$

$$\frac{11}{35}$$

$$\frac{9}{7} - \frac{1}{9} =$$

$$\frac{61}{63}$$

$$\frac{42}{49}$$

$$\frac{47}{63}$$

$$\frac{2}{4} + \frac{5}{2} =$$

$$\frac{12}{4}$$

$$\frac{25}{8}$$

$$\frac{7}{12}$$

$$\frac{6}{8} - \frac{1}{3} =$$

$$\frac{7}{11}$$

$$\frac{10}{24}$$

$$\frac{26}{24}$$
