Mathematics- Computation

Topic: Inverse Operation- Multiplication to Division

Write the inverse operation for each multiplication sentence.

For example: $2 \times 3 = 6$ INVERSE (Division) = $6 \div 2 = 3$
= $6 \div 3 = 2$

1) $2 \times 6 = 12$ INVERSE (Division) = $\square \div \square = \square$
= $\square \div \square = \square$

2) $3 \times 8 = 24$ INVERSE (Division) = $\square \div \square = \square$
= $\square \div \square = \square$

3) $4 \times 9 = 36$ INVERSE (Division) = $\square \div \square = \square$
= $\square \div \square = \square$

4) $6 \times 7 = 42$ INVERSE (Division) = $\square \div \square = \square$
= $\square \div \square = \square$

5) $7 \times 9 = 63$ INVERSE (Division) = $\square \div \square = \square$
= $\square \div \square = \square$
