What does Sustainability means?

Sustainability means meeting the needs of the present without compromising the ability to meet future needs.

Basic Human Needs

Our basic needs fall into three categories

It focuses on two goals:

1. To improve the quality of life for all of the Earth's citizens.
2. To stop using up the natural resources beyond the capacity of the environment to supply them indefinitely.

Green development is generally differentiated from sustainable development in that Green development prioritizes what its proponents consider to be environmental sustainability over economic and cultural considerations. In addition to that, sustainable development has underlying concepts: the concept of 'needs', in particular the essential needs of the world's poor, to which overriding priority should be given; and the idea of limitations imposed by the state of technology and social organization on the environment's ability to meet present and future needs. There is an additional focus on the present generations' responsibility to improve the future generations' life by restoring the previous ecosystem damage and resisting to contribute to further ecosystem damage.

Sustainable development requires action on the part of world states, governments and people. The detrimental situation of the environment, the enormous stress upon our natural resources and the huge gap between developed and underdeveloped countries, necessitate practical strategies to reverse the trends. [The World Commission on Environment and Development](#) suggested seven critical objectives for environment and development policies that follow from the concept of sustainable development:

- Reviving growth
- Changing the quality of growth
- Meeting essential needs and aspirations for jobs, food, energy, water and sanitation
- Ensuring a sustainable level of population
- Conserving and enhancing the resource base
- Reorienting technology and manage risk
- Including and combining environment and economics considerations in decision-making
