

Nombre del alumno:

Instrucciones. Resuelve la siguiente ecuación cuadrática utilizando la fórmula general.

$$x = \frac{-b \pm \sqrt{b^2 - 4ac}}{2a}$$

$$2x^2 + 9x + 10 = 0$$

$$a = \boxed{\phantom{00}}$$

$$b = \boxed{\phantom{00}}$$

$$c = \boxed{\phantom{00}}$$

$$x = \frac{-\boxed{\phantom{0}} \pm \sqrt{\boxed{\phantom{0}}^2 - 4 \boxed{\phantom{0}} \boxed{\phantom{0}}}}{2 \boxed{\phantom{0}}}$$

$$x = \frac{-\boxed{\phantom{0}} \pm \sqrt{\boxed{\phantom{00}} - \boxed{\phantom{00}}}}{\boxed{\phantom{00}}}$$

$$x = \frac{-\boxed{\phantom{0}} \pm \sqrt{\boxed{\phantom{000}}}}{\boxed{\phantom{00}}}$$

$$x_1 = \frac{\boxed{\phantom{0}} + \boxed{\phantom{0}}}{\boxed{\phantom{0}}}$$

$$x_1 = \frac{\boxed{\phantom{0}}}{\boxed{\phantom{0}}}$$

$$x_1 = \boxed{\phantom{0}}$$

Nota: aquí va un resultado negativo y decimal

$$x_2 = \frac{\boxed{\phantom{0}} - \boxed{\phantom{0}}}{\boxed{\phantom{0}}}$$

$$x_2 = \frac{\boxed{\phantom{0}}}{\boxed{\phantom{0}}}$$

$$x_2 = \boxed{\phantom{0}}$$
