Read the text below and finished the tasks!

Where Does Rain Come From?

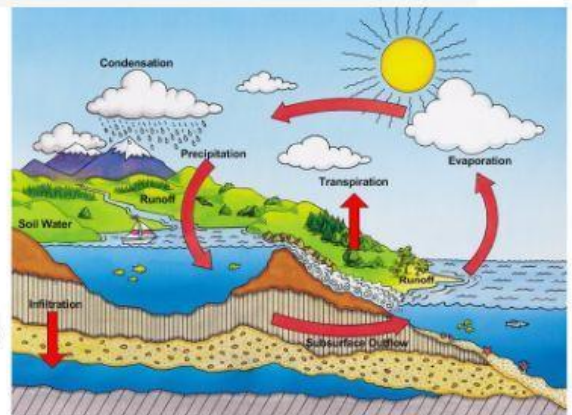

Rain always come from clouds.
But where do clouds come from?
How does all that water get into the sky?

Think about your bathroom, now.
There's hot water in your bath. Steam goes up from the hot water. The steam makes small clouds in the bathroom. These warm clouds meet the cold walls and windows and then we see small drops of water on the walls and windows, right?

The world is like your bathroom.

The water in the oceans is warm when the sun shines on it. Some of this water goes up into sky and makes clouds. The wind carries the clouds for hundreds of kilometers. Then the clouds meet cold air in the sky, and we see drops of water. The drops of water are rain.

The rain falls and runs into rivers. Rivers run into oceans. And the water from oceans to clouds and more rain. So water is always moving from oceans to clouds to rain to rivers to oceans. So the rain on your head was on other heads before!! The water in your garden was in other gardens in the other countries.

LIVE BUTTERFLY KITS

Arrange the process of butterfly metamorphosis by match the process with the number.

PROCESS
When the caterpillar has reach its full size, they form into a "chrysalis", or "pupa".
When the egg hatches, a "larva" or "caterpillar" emerges.
The first stage of a butterfly's life is a very small oval, round, or cylindrical egg, depending on the species of butterfly.
The adult butterfly emerges from the chrysalis with its soft wings folded about its body.
