Head proportions

A. Watch the video on drawing the head.
B. Put the steps in the correct order.

	The bottom third dividing line becomes our eye line.
	Draw the eyes so that the distance between them is equal to one eye.
	Draw two horizontal lines that divide it in three equal parts.
	The eyebrows' height should be about half of an eye above the eyes.
	Draw the chin shape.
	Draw a circle.
	The top third part becomes the mouth line.
	Draw the nose in the (middle) bottom of the circle.
	Draw the ears between these two lines.
	Draw another horizontal line so that the distance between the eye line and the bottom of the circle is the same as the distance between the bottom of the circle and the new line.
	Divide the space between the bottom of the nose and the bottom of the chin into three.
	Draw a vertical line in the middle of it.
	Draw one horizontal line from the top of the eyebrows and another line from the bottom of the nose.

Head proportions – side view

A. Watch the video on drawing the head in side view.
B. Complete the gaps in the sentences.

1) Start by drawing an ..... shape, not a circle.

2) Draw a vertical line in the ..... of it.

3) Divide it into ..... equal parts with two horizontal lines.

4) The bottom line is now our ..... line.

LIVEWORKSHEETS

5) Measure the space from the eye line to the top of the ..... and duplicate it down to find the bottom of the .....

6) Draw the chin and .....

7) Divide the space from the center line to the front of the face into ..... sections.

8) Then we get the location of the eye which we do by a simple ..... shape.

9) Draw a straight horizontal line in the bottom of the oval shape and draw the ..... there.

10) Then divide the space between the nose and the bottom of the chin into three and find your ..... line.

11) After that draw the .....

12) Finally, measure the space from the eyebrow line to the bottom of the nose line – that's the height of your .....
