

AUTO MECHANIC TOOLS

In this section you will find interactive exercises to help you study the basic mechanics' tools and improve your language level.

EXERCISE 1

Match the pictures with the captions. There is one extra word.

jack

handsaw

toolbox

nails

chainsaw

spanner/wrench

drill

hammer

screwdriver

EXERCISE 2

Read about tools and fasteners they are used with. Then do the matching up exercise.

Hammer

A hammer is a tool consisting of a weighted "head" fixed to a long handle that is swung to deliver an impact to a small area of an object. This can be, for example, to drive nails into wood, to shape metal, or to crush rock.

Screwdriver

A screwdriver is a tool, manual or powered, used for tightening and loosening screws. A typical simple screwdriver has a handle and a shaft, ending in a tip. Typical screwdriver tips include:

Phillips (+) and flat head (-). The end of the screwdriver must match up with the head of the screw in order to work! A flathead screwdriver is meant to be used with slotted screws. Phillips head screwdrivers are to be matched with Phillips head or crosshead screws.

Wrench

A wrench or spanner is a tool used to tighten or loosen bolts and nuts. The most common shapes are: open-end wrench, box-end wrench and adjustable one. The wrench must fit the nut in order to turn it!

Drill

A drill is a tool used for making holes or driving fasteners into material such as wood or metal. It is fitted with a bit, either a drill or driver, depending

on application. Drills vary in speed, power, and size.

TOOLS

1. wrench
2. flathead screwdriver
3. hammer
4. Phillips head screwdriver
5. drill

HARDWARE

- a) self-tapping screws
- b) crosshead screws
- c) slotted screws
- d) bolts and nuts
- e) nails
