

PART 1

1. The diagram below shows an experiment to separate a mixture using distillation method. The boiling point of alcohol is 78°C and water is 100°C.

a) At what temperature does the liquid start to flow out of the condenser?

.....°C.....

b) What is this liquid?

.....

c) At what temperature will liquid starts to flow out of the condenser again?

.....°C.....

d) What is this liquid?

.....

e) What is the use of the porcelain/boiling chips in this experiment?

.....

f) Why is it possible to separate water and alcohol in a mixture?

.....
