

MATH 2

Learning 2D shapes

How many sides they have

How many corners they have

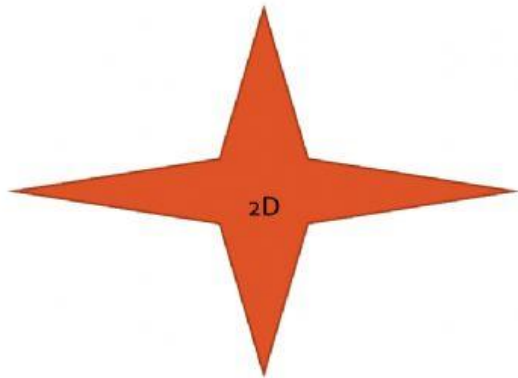

What are 2D shapes

- A 2D shape is a **flat shape that has only two dimensions – length and width, with no thickness or depth**, that is the reason why it is called a two-dimensional shape. For example, a sheet of paper is two-dimensional in shape. It consists of a length and a width but does not have any depth or height.

There are

2D shapes

3D shapes
