

English Year 4

Week 8 (21st February 2022)

Lesser Rock Frog

Physical Characteristics: This frog is small. Males can grow up 30mm long. Females can grow up to 55mm long. It breathes through its skin. It has long legs with webbed feet. It is green and brown, which helps it camouflage with rocks.

Habitat: This frog lives in streams and waterfalls.

Diet: It eats insects.

Behaviour: It lifts its back leg and waves to communicate. It lays its eggs in streams. It sleeps in the day and looks for food at night.

Dangers: This frog is endangered. There are a small number of these frogs living in Borneo. Dirty water could hurt this frog.

Answer the following questions.

1. How long can a male lesser rock frog grow?

2. How does this frog breathe?

3. Where does it live?

4. Why does it wave its leg?

5. Where does it lay its eggs?
