Parts of a Plant

Can you match up each part of the plant with its description?

anther	bulb	leaf	root	shoot	stigma	bud
branch	filament	stem	seed	stamen	petal	flower

	A part of a tree growing from the main trunk.		A round organ which contains a new plant **shoot**.
	The sticky end of the female reproductive parts of the plant, where pollen from another plant is collected.		The male reproductive part of a plant, where pollen is created and then collected by insects and transported to another plant.
	The part of a plant which attaches it to the ground, taking in water and nutrients and transporting them to the rest of the plant.		A part of a plant which is detached and is carried through a dispersal method to another location and turns into another plant.
	The beginnings of a **flower** or **leaf**, where all the parts are compacted tightly together, ready to unfurl.		The part of a plant that bears **seeds** and makes reproduction possible; usually has colourful **petals**.
	The main body of a plant which usually rises up above the ground.		The part of a **stamen** that contains pollen.
	A young or new **branch** or **stem**.		A thin stalk inside a **flower** which supports the **anther**.
	The part of a plant where photosynthesis takes place. Often flat and green, it is usually attached to the **stem** or via a stalk called a petiole.		A colourful segment of a **flower**, designed to protect the reproductive parts of the plant and to attract insects for pollination.
