Alumno(a):

Rearrange what is left over

Solve the following problems. The results must be registered only with number without letters and using the quotient as it is the result of the written operation. You must attach evidence of the operations written, where you verify your procedure. Use the sheet to organize the operations and number them according to the problem.

25

Rearrange what is left over

Task

In pairs, solve the problems using the usual division algorithm.

1. A group of farmers have a plot of land of 3278 m^2 where they are going to plant five different types of grains in equal parts. What quantity of land corresponds to each type of grain?

2. The following table shows the products harvested by 16 families of ejidatarios. Complete it considering that they are going to redistribute the harvested products in equal parts and without anything left over.

Product	Kilograms harvested	Kilograms per family
Frijol	2100 kg	
Arroz	2800 kg	
Azúcar	2012 kg
