World Wildlife Day happens on March 3 every year...

This is a day to remember all wildlife over the world. Be it the smallest frog or the giant blue whale all wildlife are precious to the environment.

For many years in fact over 60 years World Wildlife Foundation (WWF) have been searching for ways to protect all animals insects and reptile from our ever changing environment.

...and celebrates the diversity of life on this planet, from the enormous blue whale to the delicate monarch butterfly. For over 60 years, WWF has sought solutions to protect wildlife by applying the best science available and working closely with local communities and Indigenous peoples.

Unfortunately, we're losing biodiversity—the rich variety of life on Earth—at an alarming rate. We've seen a 68% average decline in the number of birds, amphibians, mammals, fish, and reptiles since 1970

But there is good news., WWF has been part of successful wildlife recovery stories ranging from southern Africa's black rhino to black-footed ferrets in the Northern Great Plains. And this, in turn, is helping to protect rich and varied ecosystems while ensuring people continue to benefit from nature.

World Wildlife Day gives us an opportunity to focus on solutions and see the importance of saving our planet's incredible wildlife.

We can all make a difference, so we're sharing ways to get involved, learn, and have fun.

Questions.

1. Why is it important to celebrate World Wildlife Day?
2. In your opinion would you agree or disagree that enough is being done to protect our ecosystems? Give your reasons why?
3. Name some of the endangered species in our world today?
4. What would you do to save the wildlife from extinction?
