

Year 2 Science
(Week 10)

Review Worksheet – Feeding relationships & Endangered animals

Name: _____

Class: Year 2 A B C D

Date: th March 2022

Feeding relationships

Some animals like rabbits eat only plants (herbivores), and some like lions eat only meat (carnivores). Other animals like humans eat both plants and meat (omnivores). A **food chain** shows what an animal eats and what it is eaten by.

In this food chain, the **bird** is a **predator**, because it hunts other animals. The **caterpillar** is its **prey**, which means the animal which is hunted. The **leaf** is a **producer** because it makes its own food.

1. Match each animal to what it eats.

2. Label the **predator**, **prey** and **producer** in this food chain.

Endangered animals

Some **species** (types) of animals are very **common** – we see them often and there are lots of them. Other animals are **endangered**, which means the number of them is going down. This could be because their homes are destroyed or they get hunted. If we don't protect endangered species, they could become **extinct**, which means there will be none left.

3. Scientists are trying to help endangered species. What kinds of animals you think each one will help?

birds turtles koalas

- a) Taking plastic bags and straws out of the sea. _____
- b) Planting new trees in forests to replace those that have been removed. _____
- c) Putting trackers on chicks to find out where they fly to. _____

4. Choose the right word to explain why each animal is endangered.

I am an Amazon **parrot**. My home is the _____ which is being cleared and cut down to make land.

I am a **manatee**. I live in the warm water springs. Whenever people build new buildings, it blocks my way and plenty of waste gets washed into the water so

I might die from cold _____ water.

I am an **orangutan**. My home gets cut down for _____ use like wood, oil and rubber to be made into other things.

5. Write down how you can help to protect endangered species.

6. Write the correct science word for each description.

predator

habitat

prey

endangered

extinct

- a) The natural home of an animal. _____
- b) Animals that eat other animals. _____
- c) Animals that are eaten by other animals. _____
- d) An animal that is low in numbers, in danger or about to be none left. _____
- e) Animals that no longer exists on Earth. _____
