Olivia is an athlete. During training this morning, she ran three laps. It took her $\frac{4}{6}$ minute to finish the first lap. The second lap took her $\frac{1}{6}$ more minutes than the first lap. The third lap took her $\frac{2}{6}$ less minutes than the second lap. How much time did it take her to finish the third lap? Write the answer in simplest form.

It took her ___ minute to finish running the third lap.
