1 If there's one food that everyone can agree on, it has to be pizza.
2 You've never heard anyone say they hate pizza, right? 3 It is one of the most ubiquitous and uncontroversial foods on the planet.
4 Or is it? Strangely, the innocent pizza can be the source of many disputes.

This sort of depends on what we mean by pizza. Historically, flat bread cooked in an oven has its origins in ancient times in the Middle East. And we know that the Ancient Greeks and Romans also ate baked flat bread with oil and toppings. But the modern concept of pizza is widely thought to be Italian, and the city of Naples is proud to claim itself as pizza's birthplace. Recently, an Italian historian suggested that pizza might in fact have its origins almost 100km north of Naples, which caused a great dispute in the country.

Americans love their pizza, but how exactly you make it divides people into two camps. New York-style pizza has a crispy, thin crust and is more like classic Italian pizza. Contrast this to Chicago-style pizza, also called deep-dish pizza. There is an intense rivalry between the two cities on this matter. If you're a regular pizza eater, you're bound to prefer one over the other.

1 If you've ever been with a group deciding what sort of pizza to order, you've probably had arguments about what should go on it. 2 Clearly, tomato sauce and cheese aren't controversial. 3 But what about anchovies? Or pineapple? There are also toppings that are just bizarre, like cheeseburger or kangaroo meat. 4 And you can now even get dessert pizzas covered in chocolate or marshmallows.

1 Imagine a delicious pizza in front of you. Are you going to eat it with your hands or with a knife and fork? 3 Experts suggest that thin-crust pizza should be eaten with your hands, preferably folded in half. 4 A knife and fork is often considered a big no-no. 5 Foolishly, some American politicians have made this mistake when eating pizza on the campaign trail. 6 Even more stupidly, in our opinion, they have been harshly criticised for being snobs.

A pizza is not a pizza if it's not round, according to some people. Square or rectangular pizzas are supposedly inauthentic and also unappealing. Really?! Traditional pizza from Sicily in southern Italy is classically served as a rectangle.

And what about frozen pizza? A pizza purist would obviously argue that only a fresh pizza is the real thing. Frozen pizzas just don't taste the same and yet they are still very popular around the world.

Finally, there is the question of the crust. Theoretically, pizzas have a plain crust. The trend of filling them with another ingredient (cheese, for example) is clearly a crime. On the other hand, it does taste good!
