1. A fraction whose numerator is greater than the denominator is called a/an

   _____ fraction.   [1]

2. A fraction that made up of a combination of a whole number and a proper

   fraction is called a _____ fraction.   [1]

3. To make an equivalent fraction _____ the

   numerator and denominator by _____.   [1]

4. A fraction whose numerator is less than the denominator is called a/an

   _____ fraction.   [1]

Write an **equivalent** fraction for each of the following.

$\dfrac{5}{8}$ $\dfrac{4}{7}$ $\dfrac{3}{6}$

                                                                        [1, 1, 1]

Find the missing **numerator** or **denominator**.

$\dfrac{6}{12} = \dfrac{\quad}{24}$ $\dfrac{3}{9} = \dfrac{\quad}{45}$

                                                                        [2, 2]

ADD or SUBTRACT

$\dfrac{3}{6} + \dfrac{1}{6} =$

$\begin{array}{r} \dfrac{5}{9} \\ + \quad \dfrac{4}{9} \\ \hline \end{array}$

[1, 1]

$\dfrac{3}{4} + \dfrac{1}{6} =$

[2]

$\dfrac{4}{5} + \dfrac{1}{5} =$

$\dfrac{5}{6} - \dfrac{5}{12} =$

[1, 2]

APPLICATION

At a party, Andy and April shared an apple pie. Andy ate ⅖ of the pie and April ate ⅓ of the pie. What fraction of the pie did they eat altogether?

ANSWER: _____ [2]

When Leslie arrived at the party a whole guava duff was left. If Leslie ate ⅜ of the guava duff, what fraction of the guava duff was left?

ANSWER: _____ [1]
