**Topic: Chapter 7 – Geometry (Vertically Opposite Angle)**

Example :

$$70^\circ + \angle x = 120^\circ$$
$$\angle x = 120^\circ - 70^\circ = 50^\circ$$

Find the unknown angle.

1)

$$\angle e = \boxed{\phantom{000}}^\circ$$

2)

$$\angle d = \boxed{\phantom{000}}^\circ$$

3)

$$\angle f = \boxed{\phantom{000}}^\circ$$

4)

$$\angle d = \boxed{\phantom{000}}^\circ$$

5)

$$\angle x = \boxed{\phantom{000}}^\circ$$

6)

$$\angle X = \boxed{\phantom{000}}^\circ$$

7)

$$\angle KON = \boxed{\phantom{000}}^\circ$$

8)

$$\angle C = \boxed{\phantom{000}}^\circ$$
