

# Delicious Division with Remainders

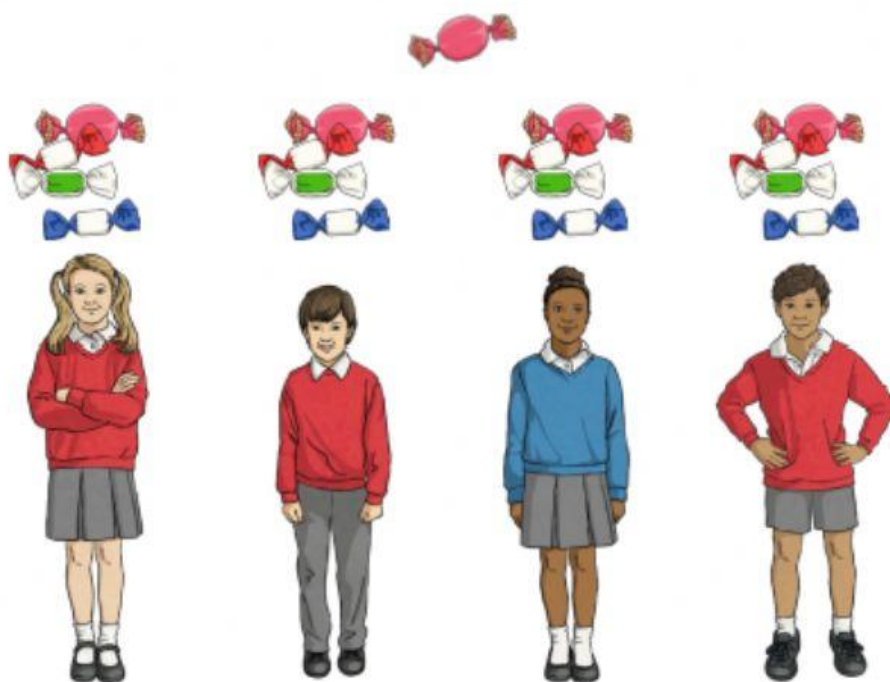

Use your times tables to help you find how many times the factor will divide equally into the multiple. Then work out how many will be left over.

Example:  $17 \div 4 = \underline{\hspace{2cm}}$

$$4 \times 4 = 16 \text{ remainder } 1$$

$$17 \div 4 = 4 \text{ r.1}$$

You might want to imagine you are dividing sweets between some friends to help you check your answers for these questions.
