

WORKSHEET (6/4/2022)

Unit 8. Life out there

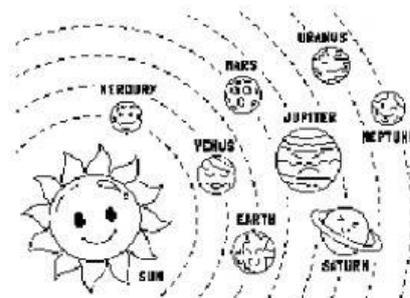

I. Read, look, choose and drag

extraterrestrial comet orbit dust galaxy solar system universe planet

II. Listen, read and write

Did you know that the sun is a.....? Long ago, people thought that the sun traveled around our....., Earth. But they were wrong! Earth orbits the sun. In fact, lots of planets.....the sun! The sun and all the planets that orbit it make up one big Earth is not as important as we used to think!

A large group of stars,, and gas held together by gravity is a galaxy. Our galaxy is called the Milky Way. It has about 100 billion stars. That's amazing! Outside our, there are more galaxies. In fact, the universe is filled with galaxies. How many? We don't know! There are too many, and many are too far away to see.

A is a cloud of rock, ice, and gas that orbits the sun. Many earth years pass in its around the sun. Scientists search space for comets. Then they predict when the next one will appear. Have you ever seen a comet?

Think of the many galaxies in the Think of the many stars in each galaxy. Think of the many planets that orbit the stars. Do you think that extraterrestrials may live on one of the planets? No one knows the answer!

III. Use the words given to write FULL sentences

1. He/ never/ eaten/ sushi./

⇒

2. Joe/ cook/ good/ than/ his/ mother/ cook.

⇒

3. No one/ my class/ be/ tall/ than/ Ben./

⇒

4. If/ he/ not/ study/ hard/ he/ get/ low/ scores./

⇒

5. you/ ever/ be/ France?

⇒
