Direction: Fill out the simplified table above using the elements given below. Use the group number and the atomic numbers to help you identify where to put the elements. You may use the previous periodic table as reference. After completing the table, answer the following questions.

H	Li	Be	Ga	Ge	As	Se	Br
Na	Mg	B	C	N	O	F	He
K	Ca	Al	Si	P	S	Cl	Ne
Ar	Kr						

1. What group does Chlorine (Cl) and Fluorine (F) belong to?
2. What element is found in group 2 with an atomic number of 12?
3. What period is Lithium (Li) found?
4. Which element is a non-metal but belongs to group 1?
5. Which group is the most non-metallic? Why?
