

MR. DAVID'S
SCIENCE REVIEW
GRADE 2

PART 4

Animal Groups

HOW DO WE CLASSIFY THESE ANIMALS?

Reptile Mammal Amphibian Fish Insect Bird

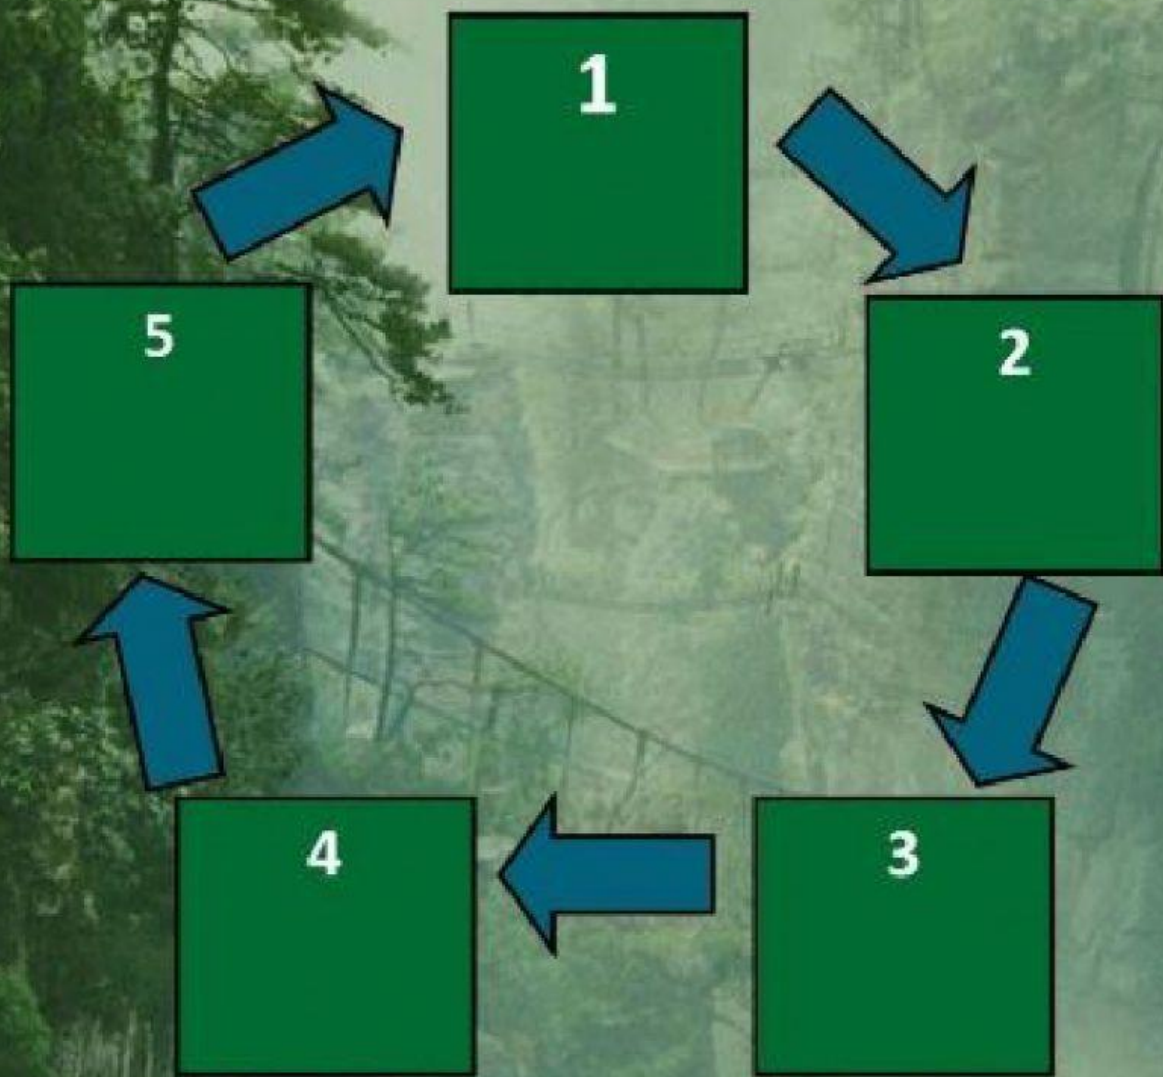

Food Chains

PRODUCER OR CONSUMER?

Frog Life Cycle

COMPLETE THE LIFE CYCLE

FOOD CHAINS

Seaweeds make their own food using sunlight. Seaweeds are producers because they use sunlight to make their own food.

Animals are consumers because they have to eat other living things to get their energy. Energy from food means you can grow and move. Every part of your body needs energy to make it work and grow.

In different environments around the world, different animals eat different things. Some animals eat only plants. Other animals eat animals. Some animals eat both.

We show this on a diagram. We call it a food chain. A food chain shows us how different living things need other living things for food.

The arrows on a food chain show the direction of energy flow.

Food chain energy both producers
sunlight consumers
