Computing (Career Paths)

Option 1. Word Test (Unit 5-Inside the computer, Unit 6-Data storage devices), Book 1

0	**E**	CPU	**A** a data storage device containing flash memory
1		case	**B** a device that provides energy to a computer
2		burn	**C** memory that retains data without a power supply
3		fan	**D** the outer protective enclosure that contains computer parts
4		processor	**E** Control Processing Unit
5		capacity	**F** a unit of a memory roughly equal to one million bytes
6		Central Processing Unit	**G** a computer part that allows programs to be interpreted and run
7		flash drive	**H** a device that reads and writes data to digital video disks
8		disk drive	**I** a device that reads and writes data to compact disks
9		power supply	**J** the amount of storage space on a disk
10		hard drive	**K** a central processor or a computer
11		CD-R (or DVD-R)	**L** to write data from a computer onto a disk
12		flash memory	**M** a part of a computer used for storage of data or program instructions
13		DVD drive	**N** a computer part that allows data to be read from and copied to a disk
14		motherboard	**O** a main device in a computer that stores data
15		MB (megabyte)	**P** a unit of a memory equal to one billion bytes
16		CD drive	**Q** a disk that can be used to store data
17		port	**R** a mechanical device used to move air rapidly in order to cool the inside of a computer
18		memory	**S** an outlet on a computer that allows it to communicate with other devices by means of a plug or cable
19		heat sink	**T** a computer part that transfers heat to the air
20		GB (gigabyte)	**U** a central circuit board of a computer
