

Causes and effects of global warming

In recent times, hurricanes, droughts, melting of the poles or floods, are increasingly frequent. This is because the temperature of the planet is rising more and more, it is what is called global warming. Unfortunately, we humans have a lot to do with this.

The main responsible for global warming is the effect_____, caused by various gases released into the atmosphere, mainly the_____.

Here's a list of causes and effects of global warming, put each one in place.

Greenhouse effect.

Disappearance of species

Hurricanes and storms

Climate change

Fuel burning (oil, coal, natural gas.)

Methane emissions from animals

Drought

Deforestation

Melting of the poles

fertilizer and aerosol abuse

Causes of global warming

Effects of global warming
