VIDEO MEMO

The Digital Video Memo is the future in leaving people messages by no more using massive amounts of paper and scribbling down notes. Talk into the Digital Video Memo and leave people a 30 second video message reminding them to do something or maybe just telling them to have a lovely day at work. It's an appropriate device for people who like to be reminded of what they need to do on a certain day. It is also magnetic which means the user can display it easily on the fridge so everyone can see it clearly as many times they want.

GOPRO LCD BACPAC DETACHABLE DISPLAY

This is a detachable (comes separated) LCD display that will accessorize a 1080p HD HERO camera. It will attach itself to the camera through the HD HERO Port, which in essence is a small expansion port that is located on the back of the camera. Since this is a removable accessory, the LCD BacPac will help the HD HERO camera maintain its status as a small and light device, while delivering the convenience of an LCD screen when attached.

Among the benefits of a detachable LCD screen on the HD HERO camera would be easy framing of complex scenes, letting people see exactly what they are shooting, playing back (to play a recording to see and hear something again) video and photos directly on the HD HERO camera, and turning the HD HERO into one of the world's most powerful everyday cameras.
