

FRACCIONES COMPLEJAS

➤ Resuelve:

$$1) \frac{\frac{5}{3}}{\frac{15}{6}} = \frac{\quad}{\quad} = \frac{\quad}{\quad}$$

$$2) \frac{\frac{4}{8}}{\frac{3}{3}} = \frac{\quad}{\quad} = \frac{\quad}{\quad}$$

$$3) \frac{\frac{7}{3} + \frac{4}{6}}{\frac{4}{5}} = \frac{\frac{\quad}{\quad} + \frac{\quad}{\quad}}{\quad} = \frac{\quad}{\quad} = \frac{\quad}{\quad} = \frac{\quad}{\quad}$$

$$4) \frac{\frac{13}{4} - \frac{1}{7} + \frac{49}{3}}{\frac{1}{5}} = \frac{\quad}{\quad} = \frac{\quad}{\quad} = \frac{\quad}{\quad}$$

$$= \frac{\quad}{\quad} = \frac{\quad}{\quad}$$
