ECUACIONES CUADRÁTICAS

$$Ax^2 + BX + C = 0$$

Discriminante: $\Delta = (B)^2 - 4(A)(C)$

EJERCICIO 1.- $3x^2 + 7X + 4 = 0$ Hallar El Discriminante

$$\Delta = (B)^2 - 4(A)(C)$$

$$\Delta = (\quad)^2 - 4(\quad)(\quad)$$

$$\Delta = \quad - \quad$$

$$\Delta = \quad$$

EJERCICIO 2.- $2x^2 + 11X + 12 = 0$ Hallar El Discriminante

$$\Delta = (B)^2 - 4(A)(C)$$

$$\Delta = (\quad)^2 - 4(\quad)(\quad)$$

$$\Delta = \quad - \quad$$

$$\Delta = \quad$$

EJERCICIO 3.- $4x^2 + 7x - 15 = 0$ Hallar El Discriminante

$$\Delta = (B)^2 - 4(A)(C)$$

$$\Delta = (\underline{\quad})^2 - 4(\underline{\quad})(\underline{\quad})$$

$$\Delta = \underline{\quad} - \underline{\quad}$$

$$\Delta = \underline{\quad}$$

EJERCICIO 4.- $x^2 - 7x + 10 = 0$ Hallar El Discriminante

$$\Delta = (B)^2 - 4(A)(C)$$

$$\Delta = (\underline{\quad})^2 - 4(\underline{\quad})(\underline{\quad})$$

$$\Delta = \underline{\quad} - \underline{\quad}$$

$$\Delta = \underline{\quad}$$
