English II
Final Test

Name: _____

Date: _____ _____

ALEXA ANSWERS QUESTIONS ON HEALTH

Technology has taken another step in helping us with our healthcare. We can now ask the digital device Alexa for advice if we are worried about our health.

Alexa is a virtual assistant created by the website Amazon.com. It is capable of listening to people and answering their questions. As well as voice interaction capabilities, Alexa can make to-do lists, play music upon voice request, and give us the latest news. Now Alexa can answer our health queries. Amazon teamed up with the UK's National Health Service (NHS) to add a health advice capability to the software. Alexa is going to be able to search the NHS website for information and find an answer that is agreed on by many health experts.

The UK said it was great that people can get good advice from their home, and that it would reduce the pressure on doctors. It wants to let patients take more control of their health. Not everyone likes the new health function. Some people say we must be careful about using Alexa for health advice and should see a doctor for serious health problems and we need to be careful also about trusting the advice of a piece of software. Other people are worried about hacking. A privacy group said Alexa is, "a data protection disaster waiting to happen".

I.- Circle if it is True or False.

The article said healthcare has taken a step towards helping technology.	**TRUE**	**FALSE**
We won't be able to ask Alexa for health advice	**TRUE**	**FALSE**
