Pasos en las ecuaciones y pruebas

$$8x + 3 = 12 + 4x$$

$$4x + 3 = 12$$

$$4x = 9$$

$$x =$$

Comprobamos

$$\frac{8(\quad) + 3}{\quad} = \frac{12 + 4(\quad)}{\quad}$$

$$4 + 10x = 5x + 10$$

$$10x = 5x + 6$$

$$5x = 6$$

$$x =$$

Comprobamos

$$\frac{4 + 10(\quad)}{\quad} = \frac{5(\quad) + 10}{\quad}$$
