## Add the Fractions

To add fractions with different denominators we must first make the denominators the same by finding the Lowest Common Multiple (LCM). Once the denominators are the same, we add as normal.

Example:  $\frac{1}{2} + \frac{1}{3} = \frac{3}{6} + \frac{2}{6} = \frac{5}{6}$

1.  $\frac{1}{2} + \frac{1}{6} = \text{---} + \text{---} = \text{---}$

2.  $\frac{2}{5} + \frac{1}{2} = \text{---} + \text{---} = \text{---}$

3.  $\frac{3}{4} + \frac{1}{8} = \text{---} + \text{---} = \text{---}$

4.  $\frac{1}{2} + \frac{1}{4} = \text{---} + \text{---} = \text{---}$

5.  $\frac{3}{5} + \frac{1}{3} = \text{---} + \text{---} = \text{---}$

6.  $\frac{2}{3} + \frac{1}{6} = \text{---} + \text{---} = \text{---}$
