

Rainfall and Biomes

Match each characteristic with the correct biome. You have to write only the number of the characteristic. Write them in order from lower to higher.

1  Many flowering shrubs and trees.	2  Plants that survive with little water.	3  More rain than the desert, less than the forest.	4  Mild temperature.
5  Very wet environments.	6  Plants with long roots to absorb and store water.	7  High temperature.	8  Also known as prairie. Covered in grass and flowers but few trees.
9  Rainy weather. More than 250 cm of rain each year.	10  Animals live with very little water due to their scaly skin.	11  Rain and snow throughout the year.	12  Very little rain.
13  Hot and dry summers and cold winters.	14  The tallest trees in the world, especially evergreen.	15  Large leaves of flowers help to absorb the small amount of sunlight that reaches the forest floor.	16  Most trees are deciduous (lose their leaves in fall and produce new ones in spring).
