

The Parts of a Plant

Watch this video about the four main parts of a plant:

Name of Part	What it Does
Flower	The flower grows fruit and seeds to make new plants. Seeds usually grow inside the fruit.
Leaf	Leaves make food for the plant. The leaf collects sunlight energy to make this food.
Stem	The stem is like the highway of the plant. It carries nutrients and water. The stem also holds the plant up.
Roots	The roots hold the plant in place. The roots also soak up nutrients and water for the plant.

Label the four parts of the plant.

Answer in a sentence. What part of the plant do you think is the most important and why?
