

Worksheet 5

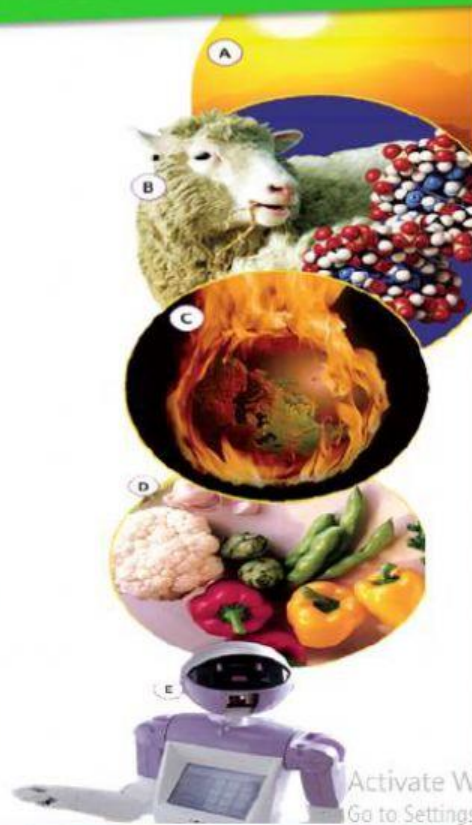

Read the text and answer the questions

Unit 5b

Science matters

Are you optimistic or pessimistic about the future?

- 1 Renewable energy** means it comes from a source that doesn't run out. For example, the wind keeps blowing, the sun keeps shining and the Earth keeps heating underground rocks. This energy will be around for as long as the Earth is. In the future we will ...
A use wind, water and solar energy.
B run out of energy.
- 2 Genetic engineering** is changing the genes of something to make it different. Scientists use genetic engineering, mostly on plants. By changing or modifying the right genes, they can get the plants to grow bigger and faster and resist diseases. If there were more genetically modified (GM) foods, ...
A it would stop famine in poor countries.
B it would harm our health.
- 3 Global warming** is a way to say that the Earth is getting hotter. This is because almost all machines use oil, gas or coal, all of which pollute the atmosphere. As a result, temperatures are rising and the polar ice caps are melting. If we hadn't been so careless, the planet wouldn't have been in this state. If we don't do something about it now, ...
A we will have to move to other planets.
B we will die.
- 4 Cloning** means to produce a copy of another living thing. Frogs, mice, sheep and cows are among the animals that scientists have successfully cloned. In the future, scientists will use cloning to ...
A save endangered species from extinction.
B help people clone themselves.
- 5 Artificial intelligence** is the ability of machines to think like humans and solve problems. If we didn't have this, we wouldn't have any computer games, Internet search engines or robots. If we keep creating intelligent machines, ...
A they will make our lives easier by doing all the hard work for us.
B they will take over the world and enslave us.

Activate Windows
Go to Settings to activate Windows.

1. What is renewable energy meaning?
2. What is genetic engineering meaning?
3. What is global warming meaning?
4. What is cloning meaning?
5. What is artificial intelligence meaning?
6. Why the Earth is getting hotter?
7. What did the animals clone successful?
8. How the science did on plants?
9. What machines think like humans?
10. What the science will use cloning to?
