10 Read the article about comics and graphic novels. Decide if the sentences are true (T) or false (F). If there is no information about this, choose 'not given' (NG).

Comics: the new popular fiction

Comics and graphic novels have been popular all around the world for over a hundred years or so and their stories have focused on everything from superheroes to politics to just simple entertainment for children.

Their golden age is widely accepted as being during the first half of the twentieth century, when the appearance of action heroes such as Superman made them extremely popular. However, the development of other forms of entertainment from the 1960s saw them drop in popularity as the public became more interested in TV and cinema instead.

But this has all begun to change in the past ten years and it seems we are starting to go back to buying comics and graphic novels again. Sales of both paper comics and digital downloads have increased, and, perhaps surprisingly, while digital sales are impressive, they are not nearly as big as sales of the paper versions. Paper sales of comics and graphic novels in the United States and Canada reached US \$870 million in 2013, whereas digital comic sales were around \$90 million. One estimate is that print sales have increased by 18% – extraordinary figures when you consider what happened to films and music when the digital revolution arrived.

One explanation may be that, as with books, people still like to be able to hold a comic, and see them as something they want to collect. The graphic novel has apparently become one of fastest-growing categories in libraries, and they are becoming increasingly popular with schools using them to teach English as a second language. It seems that there are also more girls and women reading them than in the past, and the audience no longer consists of just teenage boys. In fact, one bookstore owner has estimated that the female audience has doubled in the last five years. And while they are still in the minority, an increase in the number of women readers will no doubt have an effect on the content.

- 1 The popularity of comics has changed a lot in the past 100 years.
- 2 Comics sell more now than they did in the 1960s.
- 3 Digital comics are less popular than they were ten years ago.
- 4 There may be twice as many girls and women reading comics and graphic novels as five years ago.
- 5 Comics are more popular with boys and men than graphic novels.
