

FLOWERING PLANTS AND REPRODUCTION

Plants produce in two ways: sexual and asexual

Complete the sentences below by dragging the words in the word box:

Life cycle	Sexual	Reproduction	Seedling
Carpel/Pistil	Germinate	Asexual	Stamen

1. The female flower part is called the _____
2. The male flower part is called the _____
3. _____ the process of making new living things of the same kind
4. When new plants are produced from roots, stems, leaves and buds, it is called _____ reproduction.
5. _____ reproduction is when stamen and the pistil produce new seeds to create plants and flowers from them
6. _____ when seeds begin to grow
7. _____ a growing seed whose shoot has come through the soil
8. _____ the series of stages of growth in a plant (living thing)

Group the Sexual and Asexual parts for reproduction together:

Sexual	Asexual
