

# Creating Formulae in Excel to Multiply

**Instructions:** Create formulae to calculate the Total price of items #1-5 in column E.

|   | A                          | B            | C             | D           | E                  |
|---|----------------------------|--------------|---------------|-------------|--------------------|
| 1 | <b>Bob's Shopping List</b> |              |               |             |                    |
| 2 |                            |              |               |             |                    |
| 3 |                            | <u>Items</u> | <u>Amount</u> | <u>Cost</u> | <u>Total Price</u> |
| 4 | 1                          | bread        | 3             | \$4.95      |                    |
| 5 | 2                          | ice cream    | 1             | \$14.50     |                    |
| 6 | 3                          | soda         | 12            | \$3.75      |                    |
| 7 | 4                          | alcohol      | 2             | \$2.00      |                    |
| 8 | 5                          | crayons      | 1             | \$5.99      |                    |
