Read the story below.

Sharks

Many ocean **creatures** are hunters. They find and eat other fish. But none of them can hunt like a shark. Sharks are the best **hunters** in the water. Is it because of their big strong teeth? They do have scary **teeth**, but their senses are even scarier.

A **tiny drop** of blood falls into the ocean. A few minutes later ten sharks **appear**. How did they know? Sharks have a very good sense of smell. Their noses are **amazing**. They know exactly where a smell is coming from.

If a shark smells a fish, it knows which way to swim to find it. Sharks can also see very well too. Some parts of the ocean don't get much light. Sharks can find fish even in these dark places.

Still don't think sharks are the best hunters? Try hiding from a shark. It's not easy. It will find you easily. Sharks can feel things moving in the water. They can feel the water **change** if something swims near them.

Did you know that some sharks sleep with their eyes open? It's true! How do we know if a shark is sleeping or looking for something to eat? We don't! And there's only one way to find out.
