Prime numbers vs. Composite numbers

Prime number	Composite number
Prime numbers are whole numbers with _____ factors, including 1 and itself.	Composite numbers are whole numbers with _____ two factors.

Example:

(1) 7 is a _____ number.

$$1 \times 7 = 7$$

❖ 7 has only factors 1 and 7.

❖ 7 can NOT be evenly divided by any other whole numbers.

(2) 16 is a _____ number.

$$1 \times 16 = 16$$

$$2 \times 8 = 16$$

$$4 \times 4 = 16$$

❖ The factors of 16 are 1, 2, 4, 8, and 16.

❖ 16 has _____ two factors.

DO NOW!

Numbers	<u>All</u> of the Factors of given numbers	Prime OR Composite
Example: 2	1, 2	<u>Prime</u> (because 2 has two factors only)
Example: 6	1, 2, 3, 6	<u>Composite</u> (because 6 has more than two factors)
