

transforma esta operación
extrayendo factor común y
resuelve:

$$(9 \cdot 7) + (9 \cdot 4) = \underline{\quad} \cdot (\underline{\quad} + \underline{\quad}) = \underline{\quad}$$

$$(6 \cdot 4) + (2 \cdot 4) = \underline{\quad} \cdot (\underline{\quad} + \underline{\quad}) = \underline{\quad}$$

$$(3 \cdot 11) + (11 \cdot 4) = \underline{\quad} \cdot (\underline{\quad} + \underline{\quad}) = \underline{\quad}$$

$$(2 \cdot 5) + (4 \cdot 5) = \underline{\quad} \cdot (\underline{\quad} + \underline{\quad}) = \underline{\quad}$$
