PART 6

1. Match the sentence halves.

If objects have opposite charges,	it will not produce a current.
If electrons move from atom to atom,	some electrons will move from one object to another.
If there is an exchange of electrons between elements,	you will need four basic parts.
If an electrical circuit doesn't have a battery,	an electric current will happen.
If you rub two uncharged objects together,	this will result in an unequal number of electrons.
If you want to build an electrical circuit,	they will attract each other.

2. Put the words in order to create sentences.

his tomorrow. new is demonstrating invention He

give lecture a week. coming to next is She

afternoon. making I electrical this circuit an am
