Welcome to Moo Moomath and Science and The Pros and cons of nuclear energy. In the 70s people started getting excited about nuclear energy because it has the technology required to produce energy on a large scale. In fact nuclear energy accounts for roughly 20 percent of the electricity produced in the U.S In addition, nuclear wastes are not pumped into the atmosphere like coal plants but instead is either buried or stored in containers this helps reduce the greenhouse effect and can be good for the atmosphere. It is estimated that since 1976 64 gigatons of CO_2 emissions have not been released into the atmosphere due to nuclear power in other words nuclear power can have a significant dampening effect on climate change. So do you want the dangerous waste bearing in a big hole or pumped into the atmosphere?

But nuclear power has a dark side nuclear power plants can help create nuclear weapons. The nuclear fuel which is most commonly uranium-235 and plutonium-239 can be used to create nuclear weapons enrichment can be used with uranium-235 to produce a grade that will fission so quickly that it's basically an atomic bomb the atomic bomb that we exploited over Hiroshima Japan had this type of highly enriched uranium nuclear waste is very toxic and can be toxic for thousands of years nuclear power plants produce roughly 2 000 metric tons of waste each year because the nuclear waste can be poisonous for thousands of years storage of the waste can be challenging and dangerous deep geological storage. Storage areas can be helpful but few countries have these deposits available accidents occur at nuclear power plants and they can have a negative long-term impact on the area around the plant and can create large areas of land unfit for humans to live in a nuclear meltdown is always a possibility there have been three major nuclear accidents three miles island in the US Chernobyl in The Soviet Union and Fukushima in Japan each of these accidents have long-term negative impact on the area where they're located for example in the county where the three-mile island plan is located the 1979 death rate among infants under one year represented a 28 increase over that of 1978.

So in conclusion is nuclear energy an answer to our growing energy needs or a disaster waiting to happen remember kindness

Is nuclear energy with its carbon neutral waste and answer to our energy needs or a disaster waiting to happen?

III. Re-Arrange The Jumbled Text Below Into Based on The Generic Structure of Discussion Text by Dragging and dropping them in the box below!

It is obvious that video games have more disadvantages than advantages. Therefore, parents should be very careful in selecting the appropriate games for their children.

Conversely, some people believe that video games make children lazy. They argue that playing video games is addictive. As a consequence, most of the children prefer playing video games to studying. These children find it hard to concentrate on their study because they always think about how to spend more time playing video games. In fact, there are also some children who skip their extracurricular lessons, just because they want to play video games. In addition, most of the video games often expose too much violence. Two years ago in the USA, for example, a student shot his teacher and some of his friends. Newspapers said that the boy was deeply influenced by the actions in the video games he used to play with.

People who have a pro argument claim that video games give a lot of benefits, playing video games is a good way to kill children's boredom. It can refresh the children's mind after a tiring school day. Moreover, they also argue that video games can trigger children to be more creative because the games provide challenging ways to win. In other words, they believe that the video games can actually sharpen a human's brain.

Nowadays, the video games industry is developing rapidly. It becomes a multi-billion dollar industry. Video games have become an important part not only in the children' life, but also in the adults' life. Nevertheless, there is an argument whether video games bring good or bad influences on children.
