MEDICINE FOR A HEADACHE

People go to the chemist's shop to buy medicine. They bring the medicine home and take it when they or other members of the family are ill. This story is about an Englishman who looked for some medicine but could not explain well what he wanted.

One day a man went into a chemist's shop. He saw the chemist and asked him, "Have you anything for a headache?"

The chemist said, "I have a very good medicine." Then he took a small bottle from a shelf. He held it under the man's nose and opened it.

It was not a great pleasure for the man, because tears came to his eyes and ran down his face. He could not speak and he did not like the medicine.

"What did you do?" he said when he could speak again.

"Well, I didn't do anything bad," said the chemist. "You wanted something for your headache, didn't you? That medicine has helped you, hasn't it?"

"No, it hasn't," said the man. "It's my wife that has the headache, not me!"

"Oh, I'm so sorry!" said the chemist. "Next time please tell me more about the medicine you want. And I'll ask you more questions before giving you something."

Questions 5-10 refer to the following text:

Napoleon Bonaparte's ambition to control all the area around the Mediterranean Sea led him and his French soldiers to Egypt. After losing a naval battle, they were forced to remain there for three years. In 1799, while constructing a fort, a soldier discovered a piece of stele (stone pillar bearing an inscription) known as the Rosetta stone. This famous stone, which would eventually lead to the deciphering of ancient Egyptian hieroglyphics dating to 3100 BC., was written in three languages: hieroglyphics (picture writing), demotic (a shorthand version of hieroglyphics), and Greek. Scientists discovered that the characters, unlike those in English, could be written from right to left and in other directions as well.

Twenty-three years after discovery of the Rosetta stone, Jean Francois Champollion, a French philologist, fluent in several languages, was able to decipher the first word – Ptolemy – name of an

Egyptian ruler. This name was written inside an oval called a "cartouche". Further investigation revealed that cartouches contained names of important people of that period. Champollion painstakingly continued his search and was able to increase his growing list of known phonetic signs. He and an Englishman, Thomas Young, worked independently of each other to unravel the deeply hidden mysteries of this strange language. Young believed that sound values could be assigned to the symbols, while Champollion insisted that the pictures represented words.
