5 At-Home Tips to Boost Your Brainpower

1. Stay social

It's important to stay social, not only for fun but for your brain. You are playing board games at home or catching up with friends on a video chat – being social can improve your memory functions.

2. Get lost in fiction

Reading a textbook and learning new words will help grow your intelligence and gain knowledge. But reading about moral conflicts in fiction helps exercise the brain and increase your empathy.

3. Stay active

Maintaining regular exercise can keep your mind sharp and help you stay fit. Sport reduces stress in your body and helps the brain. When we are stressed, it negatively impacts the way we think and memorize things.

4. Learn to play an instrument

It might be time to take that guitar or open that piano to help improve your cognitive function. It is not only about acquiring a new skill. Learning to play an instrument engages almost all brain parts and improves language and cognitive skills.
