2. **Imagine you eat an apple. Put these parts of the digestive system in order to digest it.**

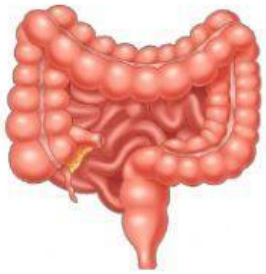

Mouth | Small Intestine | Stomach | Large Intestine | Oesophagus

First	Second	Third	Fourth	Fifth

3. **Read the following text and choose the correct answer for each question.**

The small intestine is an essential part of a digestive system. It is 6 meters long. Food enter the small intestine from the stomach, but it's still too big to be absorbed by the rest of the body. The small intestine breaks the food down even further. But it doesn't do it alone. It needs juices to do this, which it gets from the pancreas and liver. Sometimes your food can spend as long as 4 hours there, until it becomes a thin, watery mixture. Then the nutrients are small enough to pass into the blood, ready to be taken to other parts of your body.

How long is it?

a) 6 meters long
b) 60 meters long
c) 2 meters long

Where does it get its juices?

a) It gets the nutrients from the oesophagus.
b) It gets the nutrients from the pancreas and the liver.
c) It gets the nutrients from the small intestine.

How much time does food spend in the small intestine?

a) 40 hours

LIVEWORKSHEETS

b) 2 hours

c) 4 hours
