

Name: _____ Date: _____

Computation
Dividing Decimals

The steps for dividing whole numbers are:

- (a) divide
- (b) multiply
- (c) subtract
- (d) bring down

We follow the same steps when dividing decimals. Before we start dividing, we place the decimal point directly above in the quotient.

Example

$$\begin{array}{r} \times 03.2 \\ 4 \overline{)12.8} \\ \underline{0} \\ 12 \\ \underline{12} \\ 008 \\ \underline{8} \\ 000 \end{array}$$

Find the quotient. Use a paper and pencil for your working. Write your answer in the box.

1. $6.15 \div 5 =$ _____

4. $263.5 \div 5 =$ _____

2. $2.184 \div 6 =$ _____

5. $757.6 \div 8 =$ _____

3. $324.6 \div 3 =$ _____
