

# THE FIVE SENSES: HEARING

1.- Complete the picture using the words in the box.

SEMI-CIRCULAR CANALS	EARDRUM	EAR CANAL
COCHLEA	TINY EARS BONES	AUDITORY NERVE

2.- Complete.

1. The \_\_\_\_\_ pick up sound waves. The waves travel into the \_\_\_\_\_.
  2. The sound waves hit the \_\_\_\_\_, which vibrates and causes the three \_\_\_\_\_ to move.
  3. The tiny bones transmit the vibrations to the \_\_\_\_\_, which turns the sound vibrations into electrical signals.
  4. The \_\_\_\_\_ takes the electrical signals to the brain.
- The \_\_\_\_\_ are filled with liquid. They detect movement and stop us from losing balance.
