

Properties of Magnetism

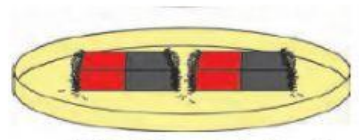

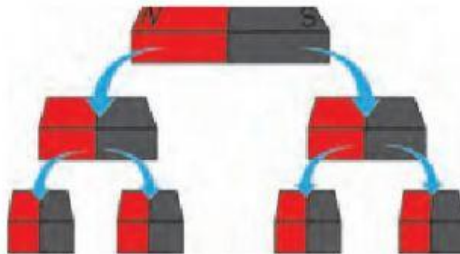

magnetic force	north-south	independent magnets
induced magnetism	like poles	attraction

1. A magnet always settles in the _____ direction.

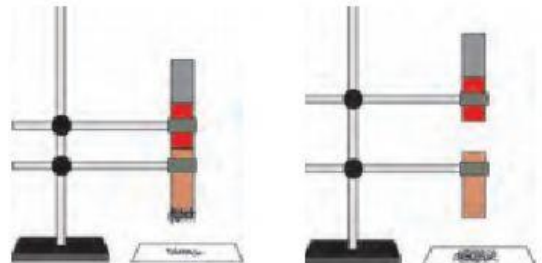

2. The _____ is concentrated at the two ends or poles of a magnet.

3. If a magnet is divided into two parts, two _____ are formed.

4. A magnetic material acquires magnetism when placed near a magnet. Magnetism of this kind is temporary. It is called _____.

5. There is repulsion between _____ of a magnet, while there is _____ between the opposite poles.
