Read the following passage and mark the letter A, B, C, or D on your answer sheet to indicate the correct answer to each of the questions from 3 to 7.

As computers have become powerful tools for the rapid and economic production of pictures, computer graphics has emerged as one of the most rapidly growing fields in computer science. **It** is used routinely in such diverse areas as business, industry, art, government, education, research, training, and medicine.

One of the initial uses of computer graphics, and ultimately its greatest use, has been as an aid to design, generally referred to as computer-aided design (CAD). One of its greatest advantages is that designers can see how an object will look after construction and make changes freely and much more quickly than with hand drafting. For three-dimensional rendering of machine parts, engineers now rely heavily on CAD. Automobile, spacecraft, aerospace, and ship designers use CAD techniques to design vehicles and test their performance. Building designs are also created with computer graphics systems. Architects can design a building layout, create a three-dimensional model, and even go for a simulated "walk" through the rooms or around the outside of the building.

Business graphics is another rapidly growing area of computer graphics, where it is used to create graphs, charts, and cost models to summarize financial, statistical, mathematical, scientific, and economic data. As an educational aid, computer graphics can be used to create weather maps and cartographic materials. Computer art also has creative and commercial art **applications**, where it is used in advertising, publishing, and film productions, particularly for computer animation, which is achieved by a sequential process.

Question 3: What does the passage mainly discuss?

A. Computer graphics applications      B. The rapidly growing field of computer science  
C. Routine use of computers      D. Computers as the architects of the future

Question 4: The word "**It**" in bold refers to \_\_\_\_\_

A. fields      B. computers      C. computer graphics      D. computer science

Question 5: One of its biggest advantages is that

A. Advertising products      B. Making cost models  
C. Rendering machine parts      D. Designers can see how an object will look after construction

Question 6: The word "**applications**" in bold means \_\_\_\_\_

A. uses      B. creativity      C. jobs      D. layers

Question 7: Which of the following is **NOT** mentioned as a use of computer graphics in business?

A. Charts      B. Hiring      C. Graphs      D. Cost models

Mark the letter A, B, C, or D on your answer sheet to indicate the word that differs from the other three in the position of primary stress in each of the following questions.

**Question 8:** A. intergrate

B. different

C. domestic

D. excellent

**Question 9:** A. nature

B. journey

C. forest

D. donate

#### **Miracle liquid (chất lỏng kì diệu)**

There is a long and rich history of using honey as medicine, especially in ancient times. Some records (13) \_\_\_\_\_ that people have used honey as a balm, an inebriant, a psychoactive substance, or as a poison. Multiple contemporary studies suggest that honeys from honeybees and stingless bees have antimicrobial, anti-inflammatory, and wound-healing properties.

Stingless bees make honey with chemicals (14) \_\_\_\_\_ ward off microbial and fungal growth an adaptation to keep the substance from spoiling in the tropics. Given the wide variety of plant biodiversity in the Amazon, and the incredible range of botanical chemicals the bees mix into their honeys and wax, it's also no surprise it has medicinal value. Indeed, some call such honey a "miracle liquid."

Already, people in the tropics use (15) \_\_\_\_\_ types of stingless bee honeys and wax from their hives to treat upper respiratory infections, skin conditions, gastrointestinal problems, and even to treat diabetes and cancer. (16) \_\_\_\_\_ research has begun providing a hint of support for some of these uses, much of it is still preliminary. More investigations into the honeys' (17) \_\_\_\_\_ benefits is urgently needed , says David Roubik, an expert on stingless bees at the Smithsonian Tropical Research Institute in Panama.

**Read the following passage and mark the letter A, B, C, or D on your answer sheet to indicate the correct answer to each of the questions from 29 to 35.**

Before the 1500's, the western plains of North America were dominated by farmers. One group, the Mandans, lived in the upper Missouri River country, primarily in present – day North Dakota. They had large villages of houses built close together. The tight arrangement enabled the Mandans to protect themselves more easily from the attacks of others who might seek to obtain some of the food these highly capable farmers stored from one year to the next.

The women had primary responsibility for the fields. They had to exercise considerable skill to produce the desired results, for their northern location meant fleeting growing seasons. Winter often lingered; autumn could be ushered in by severe frost. For good measure, during the spring and summer, drought, heat, hail, grasshoppers, and other frustrations might await the wary grower.

Under such conditions, Mandan women had to grow maize capable of weathering adversity. They began as early as it appeared feasible to do so in the spring, clearing the land, using fire to clear stubble from the fields and then planting. From this point until the first green corn could be harvested, the crop required labor and vigilance.

Harvesting proceeded in two stages. In August the Mandans picked a smaller amount of the crop before it had matured fully. This green corn was boiled, dried and shelled, with some of the maize slanted for immediate consumption and the rest stored in animal – skin bags. Later in the fall, the people picked the rest of the corn. They saved the best of the harvest for seeds or for trade, with the remainder eaten right away or stored for alter use in underground reserves. With appropriate banking of the extra food, the Mandans protected themselves against the disaster of crop failure and accompany hunger.

The woman planted another staple, squash, about the first of June, and harvested it near the time of the green corn harvest. After they picked it, they sliced it, dried it, and strung the slices before they stored **them**. Once again, they

saved the seeds from the best of the year's crop. The Mandans also grew sunflowers and tobacco; the latter was the particular task of the older men.

**Question 29:** What is the main topic of the passage?

- A. The agricultural activities of a North American Society
- B. Various ways corn can be used.
- C. The problems encountered by farmers specializing in growing one crop.
- D. Weather conditions on the western plains.
