Nowadays there are a lot of different ways to communicate with others. One of these is Twitter. People send millions of Twitter messages, or tweets, every day. One Twitter user, Eric Fischer, likes making maps.

He had an idea. He used data collected from Twitter to show all the languages used in the tweets. He needed some time to collect the data. But once he had it all, it didn't take him long to create the maps. Now we have a collection of maps which show who uses which languages and where. The maps are fascinating and also very beautiful.

In North America there aren't many different colours. English, in grey, is the main language. There's also some pink for Spanish. And there is a little purple for French in Canada. The map of Europe, on the other hand, is like a rainbow. We can see that there are big blocks of colour for languages such as English, French, Spanish, German and Italian.

But look closely and you can see there are a few areas where different languages co-exist, such as in Switzerland. But what you can see are only tweets. Some countries are almost invisible because there are only a few Twitter users there. And in some countries, like Russia, the tweets are mainly concentrated in big cities.

There are also detailed maps of specific cities. A map of London in 2012 showed that people were tweeting in 66 languages! 92.5% of all the tweets were in English. Next were Spanish, Turkish and Arabic. The experts were surprised to see that the seventh biggest language appeared to be Tagalog, from the Philippines. At first, they couldn't see any good explanations for this unusual result. They looked into it and found that many of the words were not really Tagalog. They were English terms such as 'hahahahaha', 'ahhhhhhhh' and 'lololololol'. The professor in charge of the project said: 'Tagalog wasn't included in the final map but it seems like a fun language!'
