

Exercise 8

When you describe the information in two charts, you need to look for figures and facts that are the same or different.

Look at the sentences and put them into the correct columns.

All numbers rose between 1988 and 2012.

The percentage of women working full-time increased, whereas for men it decreased.

The numbers for both men and women in employment increased.

The percentages of women working part-time are similar.

There was a significant increase in women working full-time.

In 1988, there were 12,539,000 men working full-time, in contrast only 1,550,000 were part-time.

We can see a slight increase in men working part-time.

The pie charts show identical information for 1988 and 2012.

figures/facts that are the same (or nearly the same)	figures/facts that are figures/facts that are
